ABSTRACT

Using data from the October supplements to the Current Population Survey (CPS), collected in 1984 and 1985, this report presents statistical information on students in the United States attending nursery school through college by age, race, Spanish origin, sex, marital status, household relationship, residence, and family income. The data are limited to the enrollment of civilian noninstitutional population in regular schools, and thus exclude enrollments in vocational schools, adult education classes, and special schools. The report also includes summary data from earlier CPS surveys, and a discussion of recent enrollment trends. The following highlights are included: (1) elementary and high school enrollment was 40.8 million in 1985, down from 46.1 million in 1975; (2) enrollment rates of 6- to 15-year-olds remained essentially the same, while the enrollment rates of 16- and 17-year olds grew slightly; (3) there were 12.5 million college students in 1985, 15 percent above enrollment in 1975; (4) the college enrollment rate of black 18- to 21-year-olds remained at 25 percent from 1975 to 1985, and the proportion of the age group who were high school dropouts declined by 10 percentage points to 17 percent; (5) preprimary enrollment of 3- to 5-year-olds was 5.9 million in 1985, an 18 percent increase from 1975 (due partially to a rise in the number of 3- to 5-year-olds); (6) in 1985, 38 percent of kindergarten students attended all day, up from 14 percent in 1970; and (7) in 1985, 34 percent of nursery school students attended all day, compared with 27 percent in 1970. Tables and figures illustrate the data. Appendices provide supplementary tables, definitions and explanations, and a discussion of the source and reliability of the estimates. (BJV)

Acknowledgments

This report was prepared in the Education and Social Stratification Branch, under the general direction of **Paul M. Siegel**, Chief. **Brenda R. Jeffries** contributed to table preparation, and **Andrea E. Adams** conducted the statistical review of the text. Survey operations and data processing were coordinated by **Kathleen P. Creighton**, Demographic Surveys Division. Sampling review and appendix C were provided by **Lloyd Hicks**, Statistical Methods Division. **Robert Kominski**, Education and Social Stratification Branch and **Steve W. Rawlings**, Marriage and Family Branch, Population Division, reviewed the contents of the report. Overall direction was provided by **Arthur J. Norton**, Assistant Chief, Population Division. Data collection was conducted by Bureau of the Census interviewers under the overall direction of **Stanley D. Matchett**, Chief, Field Division.

The staff of Publication Services Division, **Walter C. Odom**, Chief, performed publication planning, design, composition, editorial review, and printing planning and procurement. **Linda H. Ambill** performed publication coordination and editing.

DETAILED TABLES

1. Enrollment status for persons 3 to 34 years old, by age, sex, race, Hispanic origin, and Mexican origin: October 1985 9
2. Enrollment status for persons 3 to 34 years old by residence, age, race, Hispanic origin, and Mexican origin: October 1985 12
3. Level of enrollment for persons 3 to 34 years old by control of school, residence, sex, race, Hispanic origin, and Mexican origin: October 1985 16
4. Level of enrollment for persons 3 years old and over, by age and sex: October 1985 19
5. Attendance status for nursery school and kindergarten students 3 to 6 years old by level and control of school, residence, age, race, and Hispanic origin: October 1985 20
6. Attendance status for college students 16 to 34 years old by sex, age, residence, year and control of college, race, and Hispanic origin: October 1985 21

7. Enrollment status in 1984 for persons 14 to 24 years old by educational attainment, age, sex, race, and Hispanic origin: October 1985 22
8. Year of high school graduation for persons 16 to 34 years old by educational attainment, enrollment status, sex, and race: October 1985 25
9. Enrollment rates for persons 3 to 34 years old by age, race, Hispanic origin, and region: October 1985 27
10. Marital status for persons 14 to 34 years old by level and status of enrollment, attendance status, age, sex, and race: October 1985 28
11. Enrollment status of primary family members 3 to 34 years old by educational attainment of family householder, level and control of school, sex, race, and Hispanic origin: October 1985 30
12. College attendance of primary family members 18 to 24 years old, by family income, race, and Hispanic origin: October 1985 35
13. Primary family members 18 to 24 years old by family income, enrollment status, control of school, marital status, sex, race, and Hispanic origin: October 1985 ... 36
14. Primary family members 3 to 17 years old by family income, enrollment status, level and control of school, sex, race, and Hispanic origin: October 1985 40
15. Single grade of enrollment and high school graduation status for persons 3 to 34 years old by age, sex, race, and Hispanic origin: October 1985 44
16. Modal grade of enrollment and age for persons 3 to 21 years old by sex, race, and Hispanic origin: October 1985 48
17. Persons 35 years old and over by enrollment and attendance status, labor force status, marital status, sex, and race: October 1985 51
18. Enrollment of college undergraduates 14 to 34 years old by type of college, residence, age, and sex: October 1985 52
19. Attendance status of college undergraduates 16 to 34 years old by sex, age, residence, and type, year, and control of college: October 1985 53
20. Year of high school graduation for college undergraduates 16 to 34 years old by type and year of college and sex: October 1985 54
21. Enrollment status in 1984 for college undergraduates 14 to 24 years old by type of college, educational attainment, age, and sex: October 1985 54
22. College undergraduates 14 to 34 years old by type of college and region: October 1985 55
23. Marital status of college undergraduates 14 to 34 years old by type of college, attendance status, age, and sex: October 1985 56
24. Undergraduate attendance status of primary family members 14 to 34 years old by educational attainment of family householder and type and control of college: October 1985 57
25. Primary family members 18 to 24 years old enrolled as undergraduates by family income, marital status, type and control of college, and sex: October 1985 58
26. Enrollment status for persons 3 to 34 years old, by age, sex, race, Hispanic origin, and Mexican origin: October 1984 59
27. Level of enrollment for persons 3 to 34 years old by control of school, sex, race, Hispanic origin, and Mexican origin: October 1984 61
28. Level of enrollment for persons 3 years old and over, by age and sex: October 1984 62
29. Attendance status for nursery school and kindergarten students 3 to 6 years old by level and control of school, age, race, and Hispanic origin: October 1984 63
30. Attendance status for college students 16 to 34 years old by sex, age, year and control of college, race, and Hispanic origin: October 1984 64
31. Enrollment status in 1983 for persons 14 to 24 years old by educational attainment, age, sex, race, and Hispanic origin: October 1984 65
32. Year of high school graduation for persons 16 to 34 years old by educational attainment, enrollment status, sex, and race: October 1984 68
33. Enrollment rates for persons 3 to 34 years old by age, race, Hispanic origin, and region: October 1984 70

34. Marital status for persons 14 to 34 years old by level and status of enrollment, attendance status, age, sex, and race: October 1984 71
35. Enrollment status of primary family members 3 to 34 years old by educational attainment of family householder, level and control of school, sex, race, and Hispanic origin: October 1984 73
36. College attendance of primary family members 18 to 24 years old, by family income, race, and Hispanic origin: October 1984 80
37. Primary family members 18 to 24 years old by family income, enrollment status, control of school, marital status, sex, race, and Hispanic origin: October 1984 ... 80
38. Primary family members 3 to 17 years old by family income, enrollment status, level and control of school, sex, race, and Hispanic origin. October 1984 84
39. Single grade of enrollment and high school graduation status for persons 3 to 34 years old by age, sex, race, and Hispanic origin: October 1984 88
40. Modal grade of enrollment and age for persons 3 to 21 years old by sex, race, and Hispanic origin: October 1984 92
41. Persons 35 years old and over by enrollment and attendance status, labor force status, marital status, sex, and race: October 1984 95
42. Attendance status of college undergraduates 16 to 34 years old by sex, age, and type, year, and control of college: October 1984 96
43. Year of high school graduation for college undergraduates 16 to 34 years old by type and year of college and sex: October 1984 97
44. Enrollment status in 1983 for college undergraduates 14 to 24 years old by type of college, educational attainment, age, and sex: October 1984 97
45. College undergraduates 14 to 34 years old by type of college and region: October 1984 98
46. Marital status of college undergraduates 14 to 34 years old by type of college, attendance status, age, and sex: October 1984 99
47. Undergraduate attendance status of primary family members 14 to 34 years old by educational attainment of family householder and type and control of college: October 1984 100
48. Primary family members 18 to 24 years old enrolled as undergraduates by family income, marital status, type and control of college, and sex: October 1984 101

School Enrollment—Social and Economic Characteristics of Students: October 1985 and 1984

INTRODUCTION

This report presents data on school enrollment from the October supplements to the Current Population Survey (CPS), collected in 1984 and in 1985. The statistical tables present data for students attending nursery school through college by age, race, Spanish origin, sex, marital status, household relationship, residence, and family income. The tables are limited to enrollment of the civilian noninstitutional population in regular schools, and thus exclude enrollments in vocational schools, adult education classes, and special schools. This report also contains summary data from earlier CPS surveys (appendix A) and a discussion of recent enrollment trends. Advance reports, based on the October 1984 and 1985 CPS data, covered changes in the number of persons enrolled in school and were released earlier as Current Population Reports, Series P-20, Nos. 404 and 409.

Highlights

- Elementary and high school enrollment was 40.8 million (± 0.4)[1] in 1985, down from 46.1 million (± 0.4) in 1975.
- Enrollment rates of 6- to 15-year-olds remained essentially the same, with changes in enrollment mirroring changes in the size of the school-age population. The enrollment rate of 16- and 17-year-olds grew slightly.
- There were 12.5 million (± 0.3) college students in 1985, 15 percent (± 3) above enrollment a decade earlier.
- The college enrollment rate of Black 18- to 21-year-olds did not change from 1975 to 1985—it remained at 25 percent (± 2), while the proportion of the age group who were high school dropouts declined by 10 percentage points (±3) to 17 percent (±2).
- Preprimary enrollment of 3- to 5-year-olds was 5.9 million (±0.2) in 1985, an 18 percent (±5) increase over the number enrolled a decade earlier, due to an increase in the population of 3- to 5-year-olds and a rise in their enrollment rate.
- In 1985, 38 percent (±2) of kindergarten students attended full day, up from 14 percent (±2) in 1970.
- In 1985, 34 percent (±3) of nursery school students attended full day, compared with 27 percent (±3) in 1970.

OVERALL ENROLLMENT TRENDS

Total school enrollment of the population 3 years old and over in 1985 was 59.8 million (table 4), a decrease of 4 percent since 1975. While elementary school and high school enrollment continued to decline in the 1980's,[2] nursery school and kindergarten enrollment grew. The long-term decline in total births was reversed in the late 1970's and consequently, larger cohorts of children have begun to move into the preprimary and early elementary grades. Elementary school enrollment appears to have bottomed out and is not likely to decline further in the near future. Increases have been observed in the first two grades since 1982. The impact of the larger cohorts entering elementary school should be evident in total elementary school enrollment numbers before 1990. From 1985 to 1990 the elementary school-age population (6 to 13 years old) will increase by over 2 million (8 percent) having decreased by 6.7 million since 1970.[3]

College enrollment grew by 15 percent from 1975 to 1985. Sixty-five percent of the growth was in the number of students 25 years old and over. Those older students were 34 percent of all students in 1975 and 38 percent in 1985.

PREPRIMARY ENROLLMENT

Kindergarten and nursery school enrollment of 3- to 5-year-olds not only has grown over the last decade and a half (from 4.1 million to 5.9 million students), but also has become increasingly full-day (table A).

[1]The data in this report are from a sample survey of the population and, therefore, are subject to both nonsampling and sampling error. The number in parentheses is equal to 1.6 times the standard error of the estimate. This gives the 90-percent confidence interval when added to and subtracted from the estimate. A complete discussion of confidence intervals and standard errors is in appendix C.

[2]Elementary school enrollment began to decline in the early 1970's; high school enrollment began to decline in the late 1970's.

[3]Table 15 and Current Population Report, Series P-20, No. 222, *School Enrollment. October 1970*, Series P-25, No. 952, *Projections of the Population of the United States, By Age, Sex, and Race. 1983 to 2080*; and unpublished data.

Kindergarten. Traditionally, attendance in kindergarten has been in half-day classes, as a gradual introduction to the elementary school system. The proportion of kindergarten students attending school full day expanded from 14 percent to 38 percent between 1970 and 1985. There may be many reasons for the introduction of full-day kindergarten programs to school systems. They may include the perceived educational value of a full class-day, as early childhood education has become more common and significant proportions of young children attend nursery school. Also, the expense and difficulty of providing transportation in less populated areas for kindergarten students in half-day classes may have contributed to a decision to implement full-day programs. Services such as reduced cost meals and health care may make a full-day program desirable in some areas.

There are apparent regional differences in enrollment and in type of attendance in kindergarten. About 87 percent of all 5-year-olds were enrolled in preprimary school in October 1985 (most in kindergarten). The proportions enrolled varied from 81 percent in the Northeast to 91 percent in the Midwest (table B). Substantial differences existed between regions in full-day enrollment. The South, with the shortest history of kindergartens in the public schools, had the largest proportion of students attending full day in 1985, 65 percent (table C). The proportions of kindergarten students attending full day in the three other regions were 36 percent in the Northeast and 20 percent or less in the Midwest and West. The traditional half-day kindergarten program had not been institutionalized in the South, as it had been, over many decades, in the other regions. When kindergartens were added to the public elementary schools in the South, it may have been easier for school systems to introduce new programs as full-day programs than it was for school systems in the other regions to change traditional half-day programs. From 1970 to 1985 the proportion of 5-year-olds enrolled in school in the South rose from 47 to 87 percent. In the rest of the country in 1970, about 79 percent were enrolled in preprimary school.[4]

Although there was little difference in the enrollment rate of 5-year-olds by metropolitan status of residence (table B), kindergarten students in central cities and nonmetropolitan areas were more likely than those in the suburbs to attend full day (table C). This may reflect both the desire for educational enrichment in less affluent areas and the expense of bussing.

About 64 percent of Black kindergarten students were attending full day in 1985, twice the proportion of Whites (table A). The higher proportion of Blacks attending full day may be explained in part by kindergarten enrollment in the South, since about 6 in 10 Black kindergarten students were in the South, compared with 3 in 10 non-Black students.[5]

Nursery school. As increased proportions of parents seek out early educational opportunities for preschool children, enrollment rates of 3- and 4-year-olds, the dominant group of nursery school students, rose from 21 percent in 1970 to 39 percent in 1985 (table A-3). The proportion of children attending nursery school full day increased from 27 percent in 1970 to 34 percent in 1985. While full-day attendance in kindergarten is a relatively new phenomenon, a substantial proportion of nursery school students attended full day in both 1970 and 1985 (table A).

Although in all comparisons in table B, 4-year-olds were significantly more likely to be enrolled than 3-year-olds, all further discussions of enrollment of nursery school age children are for 3- and 4-year-olds combined.

Some geographic differences in nursery school attendance are noteworthy. About half of 3- and 4-year-olds in the Northeast were enrolled in school in 1985, significantly above the other regions which ranged from 35 to 39 percent (table B). Nursery school students in the South were much more likely than others to attend full day—53 percent, compared with one-quarter of those in the remainder of the country. Children living in metropolitan suburbs were more likely than those in central cities or in nonmetropolitan areas to attend school; however, it was nursery school students in central cities who were most likely to attend full day (table C).

Black and White 3- and 4-year-olds did not differ significantly in the proportion enrolled in school in 1985 (table B). Of children enrolled in nursery school, however, twice the proportion of Blacks as Whites attended full day (66 percent vs. 28 percent) (table A). The higher full-day attendance for Blacks does not appear to be related to a different labor force status distribution of their mothers. In each status, Black children were more likely than White children to be enrolled full day (table D). A factor contributing to the difference is that Blacks were more likely to be in the South and in central cities, where full-day attendance was most common.

In all regions roughly one-third of nursery school students were in public schools. Some public elementary school systems included preschool programs. In addition, the Federal Head Start program is active in all regions and comprises about half of public nursery

[4]Unpublished data from October 1970 Current Population Survey.

[5]From detailed tabulations available from the Bureau of the Census upon request (65 pages for $20.00).

school enrollment.[6] Of children attending nursery school, those in suburbs of metropolitan areas were least likely to attend public programs. Head Start is most active in areas which demonstrate economic need, largely central cities and rural areas. About 40 percent of nursery school students in central cities and non-metropolitan areas attended public nursery schools compared with 27 percent in the suburbs (table C). Black children were twice as likely as Whites to attend public nursery school (table A).

IS PREPRIMARY SCHOOL ALSO DAY CARE?

Because of nearly universal availability of kindergarten, the vast majority of 5-year-olds were enrolled in school in 1985 (including some in first grade). There is virtually no difference in the proportion of 5-year-olds enrolled by mother's labor force status (table D). There was some discrepancy in the proportions enrolled full day, between children whose mothers worked and those whose mothers did not work, but it was not great enough to suggest that full-day kindergarten programs were used primarily as child care arrangements for working mothers. Nevertheless, some working parents may opt for a school with a convenient full-day program. Forty-two percent of kindergarten students whose mothers were in the labor force attended full day (including 47 percent of those whose mothers were employed full time), compared with 34 percent of those whose mothers were not in the labor force (table E).

Nursery school, on the other hand, appeared more likely than kindergarten to serve as day-care, even though a much smaller proportion of nursery school age children than kindergarten age children attended school (20 percent of 3- and 4-year-olds in 1970 and 39 percent in 1985, compared with 80 percent or more of 5-year-olds in both years).[7] There was a stronger relationship between mother's labor force status and nursery school attendance than between mother's labor force status and kindergarten attendance. Three- and four-year-old children with mothers in the labor force were more likely than children with mothers not in the labor force to attend school (mostly nursery school)—44 percent vs 33 percent;[8] among 5-year-olds there was no difference—about 87 percent of each group (table D).

The difference is more striking when the relationship of mother's labor force status to full-day attendance is considered (table E). About 6 in 10 nursery school students whose mothers worked full time, (59 percent) were attending full day compared with only 16 percent of those whose mothers were not in the labor force (table E). The proportions for kindergarten students ranged from 32 to 47 percent (discussed above).

The data suggest, then, that a significant fraction of nursery school enrollment, particularly full day, may also serve as day-care for children of working parents. On the other hand, the substantial proportion of children attending, among those whose mothers were not in the labor force, provides sufficient evidence that nursery school serves a wider clientel seeking early childhood education than just families also seeking child care.

ENROLLMENT OF YOUNG ADULTS

The traditional college age population, 18 to 21 years old, is more likely than any other age group to be enrolled in college, although, because of the increased enrollment of older students in recent years, they are no longer the majority of all college students (table A-4). In 1972 (the first year data were available for all ages), 18- to 21-year-olds were 53 percent of all college students; in 1985, they were only 44 percent of all students. The number of young students (18 to 21 years old) grew by less than 1 million (15 percent), while the number of older students grew by 2.7 million (68 percent) in the period (table A-4).

The major educational transitions of America's youth occur between 18 and 21 years old. These transitions are represented in table F and figure 1, as persons of this age are distributed across four mutually exclusive statuses: enrolled in high school, high school dropout, high school graduate not enrolled in college, and enrolled in college. Overall, in 1985 the enrollment statuses of men and women were not very different: men were slightly more likely than women not to have finished high school (i.e. still enrolled or dropouts) (table F), while about equal proportions were enrolled in college.

Analyses of school enrollment data often have compared the proportions of Blacks and Whites who were either high school graduates and college enrollees or high school dropouts (not enrolled, not high school graduate). However, the fact that a substantial proportion of Blacks and Hispanics were still in high school beyond age 17 has not been noted widely (table F). Twice the proportion of 18- to 21-year-old Blacks and Hispanics as Whites remained in high school in 1985. Because of higher proportions below the modal grade in earlier years of school, Blacks and Hispanics may graduate at older ages than Whites (table 16).

[6]Department of Health and Human Services, Head Start Program.

[7]Unpublished data from October 1970 Current Population Survey.

[8]An analysis of trends appears in Current Population Report, Series P-20, No. 408, *School Enrollment—Social and Economic Characteristics of Students: October 1982.*

An earlier report in this series[9] showed that the college enrollment of Black high school graduates 18 to 24 years old grew from 1967 to 1975 to be about equal to Whites. After 1975, the proportion of Black high school graduates enrolled in college declined, while the proportion of White high school graduates enrolled continued to grow. Other changes have occurred since 197[illegible] provide a more complete perspective from which to analyze these enrollment trends: for Blacks 18 to 21 years old, there was a 10 percentage point decline in the proportion who were high school dropouts (to 17 percent in 1985 which brought the dropout proportion close to that for Whites) There was also a complementary 10 percentage point increase in the pool of high school graduates from which college enrollees are drawn, to 71 percent of the age group (table F). Of those high school graduates, only the proportion who were not enrolled in college also rose; the proportion of the age group enrolled in college did not change—it remained at 25 percent. In other words, the higher proportion completing high school combined with no change in the college-going rate had the effect of lowering the percentage of graduates who went on to college.

For Whites, there was less change in the decade: 81 percent of 18- to 21-year-olds were high school graduates in both years, the proportion enrolled in college rose 4 percentage points to 39 percent in 1985, and the proportion who were dropouts decreased slightly.

Among Hispanics, the proportion of 18- to 21-year-olds who were dropouts was substantially larger than for the other groups. The proportions enrolled in high school and college were not different from those for Blacks (table F).

[9]Current Population Report, Series P-20, No. 404, *School Enrollment—Social and Economic Characteristics of Students: October 1984 (Advance Report)*.

Eleven detailed tabulations on preprimary enrollment of 3- to 5-year-olds by age, race, and Hispanic origin, by maternal demographic, social, and economic characteristics, comprising 65 pages of computer output, are available for $20. Ask for the "preprimary tabulations," and make check payable to "Commerce-Census." Direct inquiries and requests to Paul Siegel, Population Division, U.S. Bureau of the Census, Washington, DC 20233. Telephone (301) 763-1154.

Appendix B. Definitions and Explanations

Population coverage. The figures in this report for October 1984 and 1985 are sample survey data and related to the civilian noninstitutional population of the 50 States and the District of Columbia. The estimation procedure used for this survey involves the inflation of the weighted sample results to independent estimates of the civilian noninstitutional population of the United States by age, race, and sex. These independent estimates are based on civilian noninstitutional population counts from the decennial censuses and are updated with statistics on births, deaths, immigration, and emigration and statistics on the strength of the Armed Forces. Data published for 1972 through 1980 were based on independent population estimates derived by updating the 1970 decennial census counts. Starting with the data collected in the October 1981 Current Population Survey (CPS), independent estimates were based on civilian noninstitutional population controls for age, race, and sex established by the 1980 decennial census.

The April 1980 census population count differed somewhat from the independent estimates for April 1980 derived by updating 1970 census population figures. The April 1980 census count of the civilian noninstitutional population was 222,420,441, compared with the 1970 census based figure of 217,400,244 used for the CPS. Basically, this difference had little impact on summary or proportional measures, such as medians and percent distributions; however, use of the new controls could have significant effect on the absolute numbers.

School enrollment. The school enrollment statistics from the current survey are based on replies to the enumerator's inquiry as to whether the person was enrolled in school. Enumerators were instructed to count as enrolled anyone who had been enrolled at any time during the current term or school year in any type of graded public, parochial, or other private school in the regular school system. Such schools include nursery schools, kindergartens, elementary schools, high schools, colleges, universities, and professional schools. Attendance may be on either a full-time or part-time basis and during the day or night. Thus, regular schooling is that which may advance a person toward an elementary or high school diploma, or a college, university, or professional school degree. Children enrolled in nursery schools and kindergarten are included in the enrollment figures for regular schools, and are also shown separately.

Special schools are those which are not in the regular school system, such as trade schools or business colleges. Persons attending special schools are not included in the enrollment figures.

Persons enrolled in classes which do not require physical presence in school, such as correspondence courses or other courses of independent study, and in training courses given directly on the job, are also excluded from the count of those enrolled in school, unless such courses are being counted for credit at a regular school.

College enrollment. The college enrollment statistics are based on replies to the enumerator's inquiry as to whether the person was attending or enrolled in college. Enumerators were instructed to count as enrolled anyone who had been enrolled at any time during the current term or school year, except those who have left for the remainder of the term. Thus, regular college enrollment includes those persons attending a 4-year or 2-year college, university, or professional school (such as medical or law school) in courses that may advance the student toward a recognized college or university degree (e.g., BA or MA). Attendance may be either full time or part time, during the day or night.

Two-year and four-year colleges. Students enrolled in college were asked to report whether the college in which they were enrolled was a 2-year college (junior or community college) or a 4-year college or university. Students in the first 3 years were classified by the type of college they reported. Students in the fourth academic year of college or higher were assumed to be in a 4-year college or university.

School enrollment in year preceding current survey. An inquiry on enrollment in regular school or college in October of the preceding year was asked for persons 14 to 24 years old who were enrolled in college or not currently attending regular school.

Level of school. The statistics on level of school indicate the number of persons enrolled at each of five levels—nursery, kindergarten, elementary school (first to eighth grades), high school (ninth to twelfth grades), and college or professional school. The last

group includes graduate students in colleges or universities. Persons enrolled in junior high school through the eighth grade are classified as in elementary school and the others as in high school.

Nursery school. A nursery school is defined as a group or class that is organized to provide educational experiences for children during the year or years preceding kindergarten. It includes instruction as an important and integral phase of its program of child care. Private homes in which essentially custodial care is provided are not considered nursery schools. Children attending nursery school are classified as attending during either part of the day or the full day. Part-day attendance refers to those who attend either in the morning or in the afternoon, but not both. Full-day attendance refers to those who attend in both the morning and the afternoon.

Head Start. Children enrolled in Head Start programs or similar programs sponsored by local agencies to provide preschool education to young children are counted under nursery or kindergarten as appropriate.

Public or private school. In this report, a public school is defined as any educational institution operated by publicly elected or appointed school officals and supported by public funds. Private schools include educational institutions established and operated by religious bodies, as well as those which are under other private control. In cases where enrollment was in a school or college which was both publicly and privately controlled or supported, enrollment was counted according to whether it was primarily public or private.

Basic School Enrollment Supplement
(Questions included in the October CPS since 1967)

30. Is . . . attending or enrolled in school?
Yes ○ *(Ask 31)*
No ○ *(Skip to 35)*

31. Is . . . enrolled in public or private school?
Public ○
Private ○

32. What grade or year is . . . attending?
E1 E2 E3 E4 E5 E6 E7 E8
○ ○ ○ ○ ○ ○ ○ ○ *(Skip to 40)*
H1 H2 H3 H4
○ ○ ○ ○ *(Skip to 40)*
C1 C2 C3 C4 C5 C6+
○ ○ ○ ○ ○ ○
(If entry in item 26B skip to item 34 otherwise ask item 33)
Special School ○ *(Specify type and skip to 35)*

33. Is . . . attending college full-time or part-time?
Full-time ○
Part-time ○

34. Is this a two-year college or a four-year college or university?
2-year college *(community or junior college)* ○
4-year college or university . . . ○

35. Was . . . attending or enrolled in a regular school or college in October 1984, that is, October of last year?
Yes ○
No ○

36. INTERVIEWER CHECK ITEM
Age 14–34 ○ *(Fill 37)*
Age 35+ ○ *(End questions)*

37. INTERVIEWER CHECK ITEM
(A) High School Graduate
(Entries of "H4" and "Yes" in Control Card item 23a and 23b OR entry of "C1–C6+" in Control Card item 23a) ○ *(Skip to 39)*
(B) Not High School Graduate
Age 14–24 ○ *(Ask 38)*
Age 25+ ○ *(End questions)*

38. In what CALENDAR year did . . . last attend regular school?
1985 ○ 1981 ○
1984 ○ 1980 or earlier ○
1983 ○ Never attended ○
1982 ○ *(End questions)*

39. In what CALENDAR year did . . . graduate from high school?
1985 ○ 1982 ○
1984 ○ 1981 ○
1983 ○ 1980 or earlier ○
(End questions)

Full-time and part-time attendance. College students were classified, in this report, according to whether they were attending school on a full-time or part-time basis. A student was regarded as attending college full time if he/she was taking 12 or more hours of classes during the average school week, and part time if he/she was taking less than 12 hours of classes during the average school week.

Modal grade. Enrolled persons are classified according to their relative progress in school, that is, whether the grade or year in which they were enrolled was below, at, or above the modal (or typical) grade for persons of their age at the time of the survey. The modal grade is the year of school in which the largest proportion of students of a given age is enrolled.

Age. The age classification is based on the age of the person at his/her last birthday.

Race. The population is divided into three groups on the basis of race—White, Black, and other races. The last category includes American Indians, Japanese, Chinese, other Asian and Pacific Islanders, and any other race except White and Black. In this report, other races is not shown separately.

Hispanic origin. Information on origin or descent was obtained by asking, "What is (this person's) origin or descent?" Responses generally refer to a person's perceived national or ethnic lineage and do not necessarily indicate the country of birth of himself/herself or his/her parents.

Persons of Hispanic origin are persons who reported themselves as Mexican American, Chicano, Mexican, Mexicano, Puerto Rican, Cuban, Central or South American, or other Hispanic origin. However, all persons who reported themselves as Mexican American, Chicano, Mexican, or Mexicano were combined into the one category—Mexican. Persons of Hispanic origin may be of any race.

Marital status. The marital status category shown in this report, "married, spouse present," includes persons who are currently married and living with their spouse.

The category "other marital status" includes persons who are single (never married), separated, divorced, or widowed.

Family. The term "family," as used here, refers to a group of two persons or more, related by blood, marriage, or adoption and residing together; all such persons are considered members of one family.

Primary family. A primary family is a family that includes among its members the persons or couple who maintains the household.

Family head. In the CPS, the term "head of family" was used to refer to the person maintaining the household. This practice was discontinued in surveys conducted after the 1980 Census of Population. However, in surveys taken prior to the 1980 Census of Population "family head" was used. In those surveys, husbands in husband-wife families were classified as "family heads." Women were only "family heads" if no spouse was present. The person who maintains the household is now called the "family householder."

Head versus householder. In the 1980 census, the Bureau of the Census discontinued the use of the terms "head of household" and "head of family." Instead, the terms "householder" and "family householder" were used. Recent social changes resulted in greater sharing of household responsibilities among the adult members and, therefore, made the term "head" inappropriate in the analysis of household and family data. Specifically, the Bureau reconsidered its longtime practice of always classifying the husband as the head when he and his wife are living together.

In the 1980 census, the householder was the first adult household member listed on the census questionnaire. The instructions called for listing first the person (or one of the persons) in whose name the home is owned or rented. If a home is owned jointly by a married couple, either the husband or the wife was listed first, thereby becoming the reference person, or householder, to whom the relationship of other household members was recorded. The same procedure was followed in the CPS surveys conducted after the 1980 census. Therefore, the Bureau is publishing the responses on relationship as given in the CPS—the husband or wife could be the family householder.

Years of school completed. Data on years of school completed were derived from the combination of answers to two questions: (1) "What is the highest grade of school he/she has ever attended?" and (2) "Did he/she finish this grade?"

The questions on educational attainment apply only to progress in "regular" schools. Such schools include graded public, and private, (including parochial) elementary and high schools (both junior and senior high), colleges, universities, and professional schools, whether day schools or night schools. Thus, regular schooling is that which may advance a person toward an elementary school certificate, high school diploma, or a college, university, or professional school degree. Schooling in other than regular schools was counted only if the credits obtained were regarded as transferable to a school in the regular school system.

Family income. In this report, family income is derived from a single question asked of the household respondent when a household first enters the sample and is updated on the 1-year anniversary of entry. Income includes money income from jobs; net income from business, farm, or rent; pensions; dividends; interest; social security payments; and any other money income. The income of nonrelatives living in the household is excluded, but the income of all family members 14 years old and over, including those temporarily living away, is included. It should be noted that while characteristics of the person, such as age and marital status, and the composition of families refer to the date of the interview, family income statistics refer to receipts over a 12-month period starting 12 to 16 months prior to the interview.

The income tables include in the lowest income group those who were classified as having no income in the 12-month reference period and those reporting a loss in net income from farm and nonfarm self-employment or in rental income.

The detailed income tables include a separate category for families for which no income information was obtained. In most other CPR's showing income data, the missing income data have been allocated.

The money income level of families shown in this report may be somewhat understated. Income data from the October control card are based on the respondent's estimate of total family money income in broad, fixed income intervals. Income data collected in the March supplement to the CPS are based on responses to 11 direct questions asked about each person 14 years old and over and identifying 23 different sources of income in the preceding calendar year. Previous research has shown that the use of broad income intervals to record money income tends to reduce the rate of nonreporting, while increasing the likelihood that the amounts reported will be significantly understated as compared with results from more detailed questions.

Metropolitan-nonmetropolitan residence. Data for metropolitan and nonmetropolitan areas are available in this report for October 1985 only. The Current Population Survey was undergoing a major redesign from April 1984 to June 1985, which affected the estimates of geographic components and, therefore, data for October 1984 have been omitted from this report. The major purpose of the redesign was to make use of data from the 1980 census in order to update the sampling frame, to improve the efficiency and quality of the survey, and to meet the increased need for State data. Technical aspects of the redesign are discussed in appendix C.

The population residing in metropolitan statistical areas (MSA's) constitutes the metropolitan population. MSA's are defined by the Office of Management and Budget for use in the presentation of statistics by agencies of the Federal Government. An MSA is a geographic area consisting of a large population nucleus, together with adjacent communities which have a high degree of economic and social integration with that nucleus. The definitions specify a boundary around each large city so as to include most or all its suburbs. Entire counties form the MSA building blocks, except in New England where cities and towns are used. The former term SMSA was changed to MSA in 1983.

An area qualifies for recognition as an MSA if (1) it includes a city of at least 50,000 population, or (2) it includes a Census Bureau-defined urbanized area of at least 50,000 with a total metropolitan population of at least 100,000 (75,000 in New England). In addition to the county containing the main city or urbanized area, an MSA may include other counties having strong commuting ties to the central county. If specified conditions are met, certain large MSA's are designated as consolidated MSA's (CMSA's) and divided into component primary MSA's (PMSA's).

Central cities. The largest city in each MSA is always designated a central city. There may be additional central cities if specified requirements, designed to identify places of central character within the MSA, are met. Although the largest central cities are generally included in the title of the MSA, there may be central cities that are not part of the title. The balance of the MSA outside the central city or cities often is regarded as equivalent to "suburbs."

In July 1985, the CPS began carrying the metropolitan statistical area definitions announced by the Office of Management and Budget on June 30, 1984. Figures published from the CPS in the early 1980's and throughout most of the 1970's referred to metropolitan areas as defined on the basis of the 1970 census. Since there are important differences in the population classified as metropolitan using the 1970 and 1984 definitions, comparisons should be avoided.

Comparability of metropolitan estimates. The new CPS metropolitan estimates have consistently been higher than independent estimates of the metropolitan population prepared by the Census Bureau; the new CPS nonmetropolitan estimates have been lower than the independent estimates. For example, between July 1985 and August 1986, the magnitude of the monthly differences varied from 900,000 to 2.5 million persons, so that the proportion of the population living in metropolitan areas according to the CPS has ranged from 0.4 to 1.0 percentage points higher than the independent estimate. The difference in level between the two sets of estimates is partially attributable to the basic CPS sample design, which, because of sampling variability, includes an oversample of

metropolitan households and an undersample of nonmetropolitan households. The monthly variations result from the exit and entrance of rotation groups, each with slightly different metropolitan-nonmetropolitan proportions, into the sample. The apparent overestimation of metropolitan and underestimation of nonmetropolitan population in the CPS relative to the Bureau's independent estimates should be taken into account when using the data.

Geographic regions. The four major regions of the United States, for which data are presented, represent groups of States, as follows:

Northeast— Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, and Vermont.

Midwest[1]— Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, South Dakota, and Wisconsin.

South— Alabama, Arkansas, Delaware, District of Columbia, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia, and West Virginia.

West— Alaska, Arizona, California, Colorado, Hawaii, Idaho, Montana Nevada, New Mexico, Oregon, Utah, Washington, and Wyoming.

[1]Formerly North Central.

Symbols. The following symbols are used throughout the tables:

–	Represents zero or rounds to zero.
B	The base of the derived figure is less than 75,000.
(X)	Not applicable.
(NA)	Not available.

Rounding of estimates. Individual figures are rounded to the nearest thousand without being adjusted to group totals which are independently rounded. With few exceptions, percentages are based on the rounded absolute numbers.

Appendix C. Source and Reliability of the Estimates

SOURCE OF DATA

Most of the estimates in this report are based on data obtained in October 1985 from the Current Population Survey (CPS) conducted by the Bureau of the Census and from supplementary questions to the CPS. Some estimates are based on data obtained from the CPS in earlier years. The monthly CPS deals mainly with labor force data for the civilian noninstitutional population. Questions relating to labor force participation are asked about each member in every sample household. In addition, supplementary questions regarding school enrollment are asked about all eligible household members 3 years old and over each October.

The present CPS sample was initially selected from the 1980 census files with coverage in all 50 States and the District of Columbia. The sample is continually updated to reflect new construction. Each month, approximately 60,000 housing units are eligible for interview. Of this number, about 2,500 units are visited, but interviews are not obtained because the occupants are not found at home after repeated calls or are unavailable for some other reason.

Since the inception of the CPS in 1948, the sample has been redesigned several times to upgrade the quality and reliability of the data and to meet changing data needs. The most recent changes were instituted beginning in April 1984 and resulted in implementation of the new design being completed in July 1985.

The table below shows the impact of redesign on some aspects of the CPS sample designs in use during the referenced data collection periods.

ESTIMATION

The estimation procedure used in this survey involves the inflation of the weighted sample results to independent estimates of the total civilian noninstitutional population of the United States by age, race, sex, and Hispanic categories. These independent estimates are based on statistics from the decennial censuses of population; statistics on births, deaths, immigration and emigration; and statistics on the strength of the Armed Forces. The independent population estimates used in this report to obtain data for 1981 and later are based on the 1980 decennial census. In earlier reports in this series (P-20), data for 1972 through 1980 were obtained using independent population estimates based on the 1970 decennial census. Estimates for earlier years were based on earlier censuses.

RELIABILITY OF THE ESTIMATES

Since the CPS estimates were based on a sample, they may differ somewhat from the figures that would have been obtained if a complete census had been taken using the same questionnaires, instructions, and enumerators. There are two types of errors possible in an estimate based on a sample survey: sampling and nonsampling. The accuracy of a survey result depends

Description of the October Current Population Survey

Time period	Number of sample areas	Housing units eligible	
		Interviewed	Not interviewed
October 1985	729	57,500	2,500
October 1984	[1]629/729	59,000	2,500
October 1981 to 1983	629	58,000	2,500
October 1980	629	63,000	3,000
October 1978 to 1979	614	53,500	2,500
October 1972 to 1977	461	45,000	2,000
October 1971	449	45,000	2,000
October 1967 to 1970	449	48,000	2,000
October 1965 to 1966	357	33,500	1,500
October 1960	[2]333	33,500	1,500

[1]The CPS was redesigned following the 1980 Decennial Census of Population and Housing. During phase-in of the new design with the old, housing units from both designs were in the sample.

[2]Three sample areas were added in 1960 to represent Alaska and Hawaii after statehood.

on both types of errors, but the full extent of the nonsampling error is unknown. Consequently, particular care should be exercised in the interpretation of figures based on a relatively small number of cases or on small differences between estimates. The standard errors provided for the CPS estimates primarily indicate the magnitude of the sampling error. They also partially measure the effect of some nonsampling errors in responses and enumeration, but do not measure any systematic biases in the data. (Bias is the difference, averaged over all possible samples, between the sample estimates and the desired value.)

Nonsampling Variability. Nonsampling errors can be attributed to many sources; e.g., inability to obtain information about all cases in the sample, definitional difficulties, differences in the interpretation of questions, inability or unwillingness on the part of the respondents to provide correct information, inability to recall information, errors made in data collection such as in recording or coding the data, errors made in processing the data, errors made in estimating values for missing data, and failure to represent all units with the sample (undercoverage).

Undercoverage in the CPS results from missed housing units and missed persons within sample households. Overall undercoverage as compared to the level of the 1980 decennial census is about 7 percent. It is known that CPS undercoverage varies with age, sex, and race. Generally, undercoverage is larger for males than for females and larger for Blacks and other races combined than for Whites. Ratio estimation to independent age-sex-race population controls, as described previously, partially corrects for the bias due to survey undercoverage. However, biases exist in the estimates to the extent that missed persons in missed households or missed persons in interviewed households have different characteristics from those of interviewed persons in the same age-sex-race group. Further, the independent population controls used have not been adjusted for undercoverage in the 1980 census.

For additional information on nonsampling error, including the possible impact on CPS data when known, refer to Statistical Policy Working Paper 3, *An Error Profile: Employment as Measured by the Current Population Survey*, Office of Federal Statistical Policy and Standards, U.S. Department of Commerce, 1978 and Technical Paper 40, *The Current Population Survey: Design and Methodology*, Bureau of the Census, U.S. Department of Commerce.

Sampling Variability. The standard errors given in Tables C-1 through C-4 are primarily measures of sampling variability, that is, of the variation that occurred by chance because a sample rather than the entire population was surveyed. The sample estimate and its standard error enable one to construct confidence intervals, ranges that would include the average result of all possible samples with a known probability. For example, if all possible samples were selected, each of these being surveyed under essentially the same general conditions and using the same sample design, and if an estimate and its standard error were calculated from each sample, then approximately 90 percent of the intervals from 1.6 standard errors below the estimate to 1.6 standard errors above the estimate would include the average result of all possible samples. The average estimate derived from all possible samples is or is not contained in any particular computed interval. However, for a particular sample, one can say with specified confidence that the average estimate derived from all possible samples is included in the confidence interval.

Some statements in the report may contain estimates followed immediately by a number in parentheses. For those statements, one has only to add to and subtract from the estimate the number in parentheses to calculate upper and lower bounds of the 90-percent confidence interval. For example, if a statement contains the phrase "grew by 1.7 percent (±1.0%)," the 90-percent confidence interval for the estimate, 1.7 percent, would be from 0.7 percent to 2.7 percent.

Standard errors may also be used to perform hypothesis testing, a procedure for distinguishing between population parameters using sample estimates. The most common type of hypothesis appearing in this report is that the population parameters are different. An example of this would be comparing the percent of adults who were high school graduates in 1985 to those in 1975. Tests may be performed at various levels of significance, where a level of significance is the probability of concluding that the parameters are different when, in fact, they are identical.

All statements of comparison in the text have passed a hypothesis test at the 0.10 level of significance. This means that, for all the differences cited in the text, the estimated difference between characteristics is greater than 1.6 times the standard error of the difference.

Comparability Of Data. In using metropolitan and nonmetropolitan data, caution should be used in comparing estimates for 1977 and 1978 to each other or to any other years. Methodological and sample design changes occurred in these years resulting in relatively large differences in the metropolitan and nonmetropolitan area estimates. However, estimates for 1979 and later are comparable as are estimates for 1976 and earlier.

Caution should also be used when comparing estimates for 1981 and later, which reflect 1980 census-based population controls, with estimates from earlier years. This change in population controls had relatively little impact on summary measures such as

means, medians, and percent distributions, but did have a significant impact on levels. For example, use of 1980-based population controls results in about a 2-percent increase in the civilian noninstitutional population and in the number of families and households. Thus, estimates of levels for 1981 and later will differ from those for earlier years by more than what could be attributed to actual changes in the population, and these differences could be disproportionately greater for certain subpopulation groups than for the total population.

In addition, the estimates in this report for 1985 are based on revised survey weighting procedures for persons of Hispanic origin. In previous, years the estimation procedures used in this survey involved the inflation of weighted sample results to independent estimates of the noninstitutional population by age, sex, and race. There was, therefore, no specific control of the survey estimates for the Hispanic-origin population. During the last several years, the Bureau of the Census has developed independent population controls for the Hispanic-origin population by sex and detailed age groups and has adopted revised weighting procedures to incorporate these new controls. It should be noted that the independent population estimates include some, but not all, illegal immigrants.

Note when using small estimates. Summary measures (such as medians, and percent distributions) are shown in the report only when the base is 75,000 or greater. Because of the large standard errors involved, there is little chance that summary measures would reveal useful information when computed on a smaller base. Estimated numbers are shown, however, even though the relative standard errors of these numbers are larger than those for corresponding percentages. These smaller estimates are provided primarily to permit such combinations of the categories as serve each data user's needs. Also, care must be taken in the interpretation of small differences. For instance, even a small amount of nonsampling error can cause a borderline difference to appear significant or not, thus distorting a seemingly-valid hypothesis test.

Standard error tables and their use. In order to derive standard errors that would be applicable to a large number of estimates and could be prepared at a moderate cost, a number of approximations were required. Therefore, instead of providing an individual standard error for each estimate, generalized sets of standard errors are provided for various types of characteristics. As a result, the sets of standard errors provided give an indication of the order of magnitude of the standard error of an estimate rather than the precise standard error.

The figures presented in tables C-1 through C-4 are approximations to the standard errors of various school enrollment estimates for persons in the United States. To obtain the approximate standard error for a specific characteristic, the appropriate standard error in tables C-1 through C-4 must be multiplied by the factor for that characteristic given in table C-5. These factors must be applied to the generalized standard errors in order to adjust for the combined effect of the sample design and the estimating procedure on the value of the characteristic. Standard errors for intermediate values not shown in the generalized tables of standard errors may be approximated by linear interpolation.

The standard errors in tables C-1 through C-4 and the factors in table C-5 were calculated using the b parameters in table C-5. The parameters may be used directly to calculate the standard errors for estimated numbers and percentages. Methods for computation are given in the following sections.

Standard errors of estimated numbers. The approximate standard error, Sx, of an estimated number shown in this report can be obtained in two ways. It may be obtained by use of the formula

$$Sx = fs \qquad (1)$$

where f is the appropriate factor from table C-5 and s is the standard error of the estimate obtained by interpolation from table C-1 or C-2.

Alternatively, the standard error for estimates may be approximated by formula (2) from which the standard errors in tables C-1 and C-2 were calculated. Use of this formula will provide more accurate results than the use of formula (1) above.

$$S_x = \sqrt{-\frac{b}{T}x^2 + bx} \qquad (2)$$

Here x is the size of the estimate, T is the total number of persons in a specific age group and b is the parameter in table C-5 associated with the particular characteristic. If T is not known, for Total or White use 100,000,000; for Black and Hispanic use 10,000,000.

Illustration of the computation of the standard error of an estimated number. Table A shows that in 1985 there were 5,865,000 children aged 3 to 5 years enrolled in preprimary school and 10,733,000 total children in that age group. Using formula (1) with f = 1.1 from table C-5 and s = 73,900 from table C-1, the standard error of 5,865,000 is (1.1) (73,900) = 81,300. The value of s = 73,900 was obtained by linear interpolation in two directions in Table I. The first interpolation was between 10,000,000 persons and 25,000,000 total persons for both 5,000,000 and 7,500,000 estimated persons and yielded the values 77.0 for

5,000,000 estimated persons and 68.0 for 7,500,000 estimated persons. The second interpolation was between these two values to get the value corresponding to 5,865,000 persons.

Alternatively, table C-5 indicates that the appropriate b parameter to use in calculating a standard error for this estimate is b = 2,698. Using formula (2), the approximate standard error is

$$\text{SE} \doteq \sqrt{-\frac{2698}{10{,}733{,}000}(5{,}865{,}000)^2 + (2{,}698)(5{,}865{,}000)}$$

The 90-percent confidence interval is from 5,729,000 to 6,001,000 children (using 1.6 times the standard error). Therefore, a conclusion that the average estimate from all possible samples lies within a range computed in this way would be correct for roughly 90 percent of all possible samples.

Standard errors of estimated percentages. The reliability of an estimated percentage, computed using sample data for both numerator and denominator, depends upon both the size of the percentage and the size of the total upon which this percentage is based. Estimated percentages are relatively more reliable than the corresponding estimates of the numerators of the percentages, particularly if the percentages are 50 percent or more. When the numerator and denominator of the percentage are in different categories, use the factor or parameter from table C-5 indicated by the numerator. The approximate standard error, S (x,p), of an estimated percentage can be obtained by use of the formula

$$S_{(x,p)} = fs. \qquad (3)$$

In this formula, f is the appropriate factor from table C-5 and s is the standard error on the estimate from table C-3 or C-4. Alternatively, the standard error may be approximated by the following formula from which the standard errors in tables C-3 and C-4 were calculated. Use of this formula will give more accurate results than use of formula above

$$S_{(x,p)} = \sqrt{\frac{b}{x}(p)(100 - p)} \qquad (4)$$

Here x is the size of the subclass of persons or households which is the base of the percentage, p is the percentage ($0 < p < 100$), and b is the parameter in table C-5 associated with the particular characteristic in the numerator of the percentage.

Illustration of the computation of the standard error of an estimated percentage. Table A shows that an estimated 54.7 percent of the 8,700,000 White children aged 3 to 5 years were enrolled in preprimary school in 1985. Using formula (3) with f = 1.1 from table C5 and s = .9 from table C-3, the standard error of 54.7 percent is (1.1) (0.9) = 1.0. Alternatively, using formula (5) with the appropriate b parameter of 2,698 from table C-5, the standard error of 54.7 percent is given by

$$0.9 \doteq \sqrt{\frac{2{,}698}{8{,}700{,}000}(54.7)(45.3)}$$

Thus, a 90-percent confidence interval for this estimate, using the standard error found by formula (4), is from 53.3 to 56.1 percent.

Standard error of a difference. For a difference between two sample estimates, the standard error is approximately equal to

$$S_{(x-y)} = \sqrt{S_x^2 + S_y^2} \qquad (5)$$

where Sx and Sy are the standard errors of the estimates x and y, respectively. The estimates can be numbers, percents, etc. This will represent the actual standard error quite accurately for the difference between two estimates of the same characteristic in two different areas or for the difference between separate and uncorrelated characteristics in the same area. If, however, there is a high positive (negative) correlation between the two characteristics, the formula will overestimate (underestimate) the true standard error.

Illustration of the calculation of the standard error of a difference. Table B of this report shows that in October 1985 an estimated 33.4 percent of 750,000 Black children 3 years old were enrolled in preprimary school as compared to 28.5 percent of 2,919,000 White children of the same age. Using formula (4) with the appropriate b parameter of 2,698 from table C-5, the approximate standard error of 33.4 percent is 3.3, and the approximate standard error of 28.5 percent is 1.4. The apparent difference between these two estimates is 4.9 percent, and the standard error associated with the difference is

$$3.6 \doteq \sqrt{(3.3)^2 + (1.4)^2}$$

The 90-percent confidence interval on the difference of 4.9 percent is from -0.9 to 10.7 percent. Therefore, a conclusion that the average estimate of the difference derived from all possible samples lies within a range computed in this way would be correct for

roughly 90 percent of all samples. Since this interval contains zero, we cannot conclude at the 90-percent significance level that the percentage of Black children 3 years of age enrolled in preprimary school is different from the percentage of White children of the same age group.

Table C-1. Generalized Standard Errors for Estimated Numbers of Persons: Total or White

(Numbers in thousands)

Estimated number of persons	Total persons in age group[1]									
	100	250	500	1,000	2,500	5,000	10,000	25,000	50,000	100,000

10,000	-	-	-	-	-	-	-

- Not applicable.

[1] a. These standard errors must be multiplied by the appropriate factor in table C-5 to obtain the standard error for a specific characteristic.

b. To estimate standard errors for years 1956 to 1966 multiply the above standard errors by 1.14; for 1967 to 1980, multiply by 0.93.

c. The standard errors were calculated using the formula, $\sqrt{-(b/T)\,x^2 + bx}$, where b = 2,600 (from table C-5) and T is the total number of persons in an age group.

Table C-3. Generalized Standard Errors for Estimated Percentages: Total or White

Base of percentage (thousands)	Estimated percentage[1]				
	2 or 98	5 or 95	10 or 90	25 or 75	50
100	2.1	3.3	4.6	6.6	7.6
250	1.3	2.1	2.9	4.2	4.8
500	1.0	1.5	2.0	2.9	3.4
1,000	0.7	1.0	1.4	2.1	2.4
2,500	0.4	0.7	0.9	1.3	1.5
5,000	0.3	0.5	0.6	0.9	1.1
10,000	0.2	0.3	0.5	0.7	0.8
25,000	0.13	0.2	0.3	0.4	0.5
50,000	0.09	0.15	0.2	0.3	0.3
100,000	0.07	0.10	0.14	0.2	0.2
150,000	0.05	0.09	0.11	0.2	0.2

[1] a. These values must be multiplied by the appropriate factor in table C-5 to obtain the standard error for a specific characteristic.

b. To estimate standard errors for years 1956 to 1966 multiply the above standard errors by 1.14; for 1967 to 1980, multiply by 0.93.

c. The standard errors were calculated using the formula, $\sqrt{(b/x)\,p\,(100-p)}$, where b = 2,312 from table C-5.

Table C-4. Generalized Standard Errors for Estimated Percentages: Black and Hispanic

Base of percentage (thousands)	Estimated percentage[1]				
	2 or 98	5 or 95	10 or 90	25 or 75	50
75	2.6	4.1	5.6	8.1	9.3
100	2.3	3.5	4.8	7.0	8.1
250	1.4	2.2	3.1	4.4	5.1
500	1.0	1.6	2.2	3.1	3.6
1,000	0.7	1.1	1.5	2.2	2.5
2,500	0.5	0.7	1.0	1.4	1.6
5,000	0.3	0.5	0.7	1.0	1.1
10,000	0.2	0.4	0.5	0.7	0.8
15,000	0.2	0.3	0.4	0.6	0.7
20,000	0.2	0.2	0.3	0.5	0.6

[1] a. These standard errors must be multiplied by the appropriate factors in table C-5 to obtain the standard error for a specific characteristic.

b. To estimate standard errors for years 1956 to 1966 multiply the above standard errors by 1.14; for 1967 to 1980, multiply by 0.93.

c. The standard errors were calculated using the formula, $\sqrt{(b/x)\ p\ (100-p)}$, where b = 2,600 from table C-5.

Table C-5. Parameters and Factors to be Used for School Enrollment Characteristics for Direct Computation of Standard Errors

(Use for 1981 and later years)

Characteristic	Parameters	Factors
	b	f
Persons enrolled in school		
3 to 34 years old:		
Total or White	2,312	1.0
Black	2,600	1.0
Hispanic origin	2,600	1.0
14 to 34 years old:		
Total or White	2,312	1.0
Black	2,600	1.0
Hispanic origin	2,600	1.0
Children enrolled in school		
3 to 6 years old:		
Total or White	2,698	1.1
Black	2,698	1.0
Hispanic origin	2,698	1.0
3 to 13 years old:		
Total or White	2,698	1.1
Black	2,698	1.0
Hispanic origin	2,698	1.0

[1] a. For nonmetropolitan data cross-tabulated with other data, multiply f by 1.2 and the b parameter by 1.5.

b. Multiply the b parameter by 0.87 for CPS data collected from 1967 to 1980 and by 1.3 for CPS data collected from 1956 to 1966.

c. For regional data, multiply the b parameter by 0.99 for the Northeast, 1.02 for the Midwest, 0.98 for the South, and 0.84 for the West.

U.S. G.P.O. 1988-201-478.80079
